maximum likelihood estimation
 (MLE), 30–2, 46
 initializing optimization routine
 when performing maximum
 likelihood, 125

mean reversion, 9–10, 17–50
 conditional density, 22–3, 46, 47*f*
 conditional expectations and
 probability densities,
 calculating, 33–6
 definition and benefits, 17–24
 execution strategies, assessing and
 optimizing, 42
 fitted bond curves, 178
 gold, spot price in USD, 20
 mathematical definitions, 21–4
 model estimation, 30–3
 model selection, diagnostics for,
 24–9
 buckets, 26–7, 30
 drift coefficients *see* drift
 coefficients
 multivariate *see* multivariate mean
 reversion/multivariate
 Ornstein-Uhlenbeck (MVOU)
 process
nonparametric kernel densities
 with different bandwidths, 36
practical example, 43–50
 daily change in swaption
 volatility difference series,
 43, 44*f*
 first passage time density of
 volatility spread, 48, 49*f*
 first-order nonparametric
 estimate of diffusion
 coefficient, 44, 45*f*
 first-order nonparametric
 estimate of drift coefficient,
 44, 45*f*
 swaption volatility difference
 between EUR and GBP
 5Y5Y, 43–4
